Welcome, world builder.

NPCs, quests, shops and events for your Valheim world. Start small. The suspicious furniture can wait.

1. Install the mod

Install **BepInExPack Valheim**, then import the WeaverEditor ZIP into Gale or your mod manager. Use the **same build on the server or host and every client**.

For a manual install, copy **plugins/VariantWeaver** from the ZIP into **BepInEx/plugins**. Keep **VariantWeaver.dll** and **VariantWeaver.Core.dll** together. Replace the old DLLs when updating and keep your configs.

The old package and DLL names stay in place so Variant Weaver installs can update. The menu is called WeaverEditor.

2. Press F8 in a world

Admins get the editing tools. Regular players get their journal with the pages your server allows, such as Travel, Kits, Quests, My Vendors and Costumes.

3. Choose what players see

Open **Settings > Player menu visibility** to hide individual player pages. Hiding a page keeps its saved content. Server rules are shared; appearance and sound choices stay personal.

Keep your work safe

Back up your world and **BepInEx/config/VariantWeaver**. Graph exports go to **BepInEx/config/WeaverEditor/exports**. Keep any extra content mods used by your NPCs or rewards installed on the server and clients.

Give your world a story.

Connect a few nodes, publish the graph and talk to your NPC.

Make an NPC talk

1. Open **NPCs**, place an NPC and save it.
2. Open **WeaverEditor** and create a graph.
3. Connect the Origin to Dialogue, then add Options and any Actions or Conditions you need.
4. Choose that NPC and click **Publish & link**.
5. Close the menu and press **E** to talk.

Save draft keeps work in progress. **Publish** makes the graph available in game. Use **Quest builder** for a starting quest and **Content workshop** to check missing links or move linked content together.

Make a kit or reward

Open **Community > Kits**, add items and quantities, then save. Set **Chance (%)** for each item. Every entry rolls separately, so you can guarantee supplies and add a rare reward. Players use **/kit**.

Give players their own shop

Add **Vendor Deed** to a kit and choose its NPC appearance. Players use the deed to place a shop, deposit their own stock and choose a payment item and amount. Coins, Stone, whatever pays the rent.

Owners collect stock and earnings under **My Vendors**. Admins can remove a shop; its owner can still collect what was inside. Player shop controls do not give owners admin loot tools.

Costume rewards

Save a **Costume reward**, then add **Costume Claim** to your kit and choose that reward. Players use the item to unlock it under **F8 > Costumes**. They take normal damage. Access lasts **12 real hours** by default, including offline time; you can change the duration or make it unlimited.

Open the doors.

Travel points, world props and a ready prop hunt arena.

Travel points and portals

Create a destination under **Travel**. Players use **/warp** or **/warp Destination Name**. For a physical portal, place it, choose the travel point and save. Players press **E** in its centre.

The destination keeps its access, cooldown and combat rules. When restricted items are blocked, players must store those items first. Backpack contents count too. **/sethome Name** needs an active owned ward, or an allowed guild ward with the relevant integrations.

Pictures, music and scenes

Open **World > Props** for pictures, lights and notes. Use **Browse / Import** to upload a local file, then save its placement. Open **World > Scenes** for camera shots and music. **Play Audio** can continue when playback starts or wait for the clip to finish.

Set up prop hunt

Open **World > Prop hunt > Place ready arena** and click where it should go. Choose the props, timers and reward graph, then save. Players enter the zone and press **E** at the scoreboard to join.

Props pick their first look and press **R** for a random change after the cooldown. Seekers must hit them directly with the **Pro Hunt Sword** or **Pro Hunt Crossbow**. The default crossbow reload is three seconds. Props whistle every 30 seconds. Change these rules and the map, stamina and scenery protections in the event settings.

Add winner rewards

Choose a published graph in **Winner reward graph**. Put **Give Kit** or **Grant Costume** in that graph. It runs for each winning player once per round.

Admins can spawn **VW_PropHuntSword** and **VW_PropHuntCrossbow** for testing outside a round. Those test weapons do no damage and earn no points. Regular players use the weapons issued by the event.
